

# Configure Account Updater

Last Modified on 08/03/2023 2:58 pm PDT

Go to **Administration**, select **Settings**, and then the **Account Updater** tab.

## Scheduling an Account Updater Harvest

Qualpay will harvest all cards once a month and send a request for updated information to the card brands for the harvested cards. If any updates are received, Qualpay will automatically update the card on file. If Qualpay does not receive an update, then you'll need to contact your customer for an updated card. Single-use cards, non-US issued cards, and cards marked as [held](#) will not be included in the card harvest. We suggest scheduling your account harvest at least 5 business days before you would like to receive your results.

To schedule the harvest date:

1. Click the toggle next to *Harvest Card Vault*.
2. Add the specific day of the month you want to schedule for harvest.
3. Select **Save Changes**.

## Notifications

You can elect to have Qualpay [send a summary email](#) once the Account Updater results are available.

Alternatively, use [webhooks](#) to subscribe to and receive notifications of Account Updater events. Notifications include when an account updater harvest is complete. To [configure a webhook](#), go to **Administration**, select **Webhook Configuration**, and then click on **New Webhook**.
