

Qualpay and Security

Last Modified on 05/30/2018 4:53 pm PDT

At Qualpay we adhere to all industry guidelines and standards, we always make security our priority. Qualpay is a PCI DSS Level 1 certified service provider. We complete an assessment, by an approved QSA (Qualified Security Assessor) each year, and upon completing the assessment, we become listed in the PCI Council's list of approved vendors. Please contact us at pci@qualpay.com for details about our most recent security audit.

Taking care of your data and your customer's data is of utmost importance to us. We have designed products that will help you remove sensitive payment information from your payment environments while continuing to process payments from repeat customers.

Qualpay forces HTTPS for all services using TLS 1.2, including our public website, Qualpay Manager, and Qualpay Payment Gateway. Qualpay uses HSTS (HTTP Strict Transport Security) to ensure browsers interact with Qualpay only over HTTPS. All of Qualpay's APIs require TLS1.2.
