

# Embedded Fields Configuration

Last Modified on 06/15/2023 1:51 pm PDT

To access your Embedded Fields settings, go to **Administration**, click **Settings**, then click the **Embedded** tab.

| Field   | Description  |
|---|--|
| Google V3 Recaptcha                                       | We recommend that you enable <a href="#">Google V3 Recaptcha</a> when your checkout page is accessed directly on your website and does not appear behind a login. If you already display another captcha service to prevent <a href="#">carding attacks</a> , configure this option to be off. |
| Google V3 Recaptcha Threshold Score                       | reCAPTCHA v3 returns a score (1.0 is very likely a good interaction, 0.0 is very likely a bot). Transactions below this score will be marked as suspicious.  |
| Google V3 Recaptcha Interval (min)                        | The length of time you would like your Google V3 Recaptcha Number of Suspicious requests allowed before resetting the counter.   |
| Google V3 Recaptcha Number of Suspicious requests allowed | The number of transactions scoring below the Google V3 Recaptcha Threshold Score that you would like to allow.   |
| Verify on Tokenize  | Set the toggle to <i>Yes</i> if you would like to verify your customer's card before creating the token.   |
| Maximum number of declines                                | After receiving this number of declines from the same customer, your customer will be instructed to start over. This is useful for preventing <a href="#">carding attacks</a> .  |
